● LIVE ON TESTNET 01 / 19

PITCH DECK · 2026

blank.

Private amount payments on Ethereum.

Public sender. Public receiver. [REDACTED] amount.

Same chain. Same finality. Different visibility.

► myblank.app

BLANK LABS · PRATIK

MYBLANK.APP

blank.

THE PROBLEM

Public chains publish every amount to the world.

Traditional payments do not. On-chain payments do — and that exposes business data by default.

PAYMENT TYPE	WHAT BECOMES PUBLIC
Payroll	Salaries and contractor rates
Invoices	Vendor pricing and customer spend
Fundraising	Contribution size and campaign progress
Commerce	Purchase amounts and buyer behavior
Treasury	Run rate and operating cost map

blank.

THE INSIGHT 03 / 19

THE INSIGHT

Not every privacy problem needs sender anonymity.

For normal payments, the urgent leak is the amount.

PUBLIC CHAIN TODAY

Anyone can read what you paid.

tx 0x1111 → 0x2222

amount 5,200.00 USDC

visibility · public forever

Sender, receiver, and amount — all readable by anyone with an RPC endpoint.

WITH BLANK

**The relationship stays public.
The number doesn't.**

tx 0x1111 → 0x2222

amount USDC

visibility · counterparties only

Same chain. Same finality. Different visibility.

03 · THE INSIGHT

MYBLANK.APP

blank.

THE MODEL 04 / 19

THE MODEL

Public counterparties. Private amount.

FIELD	VISIBILITY
Sender	• PUBLIC
Receiver	• PUBLIC
Chain & contract	• PUBLIC
Timestamp	• PUBLIC
Amount	• ENCRYPTED
Balance	• ENCRYPTED
Threshold result	• PUBLIC ONLY WHEN REVEALED

blank.

WHY NOW 05 / 19

WHY NOW

The timing is finally practical.

01

FHE crossed the line

From research to usable application infrastructure.

03

Crypto payments went mainstream

Payroll, vendors, contractors, creators, internet-native commerce.

02

CoFHE makes it programmable

Fhenix gives apps a path to compute over encrypted values on-chain.

04

Privacy ≠ anonymity

The market understands the difference. So can a payment app.

05 • KEEP SETTLEMENT PUBLIC. KEEP AMOUNTS PRIVATE.

MYBLANK.APP

blank.

ARCHITECTURE 06 / 19

PRIVACY ARCHITECTURE

Amounts are encrypted before they touch the chain.

WHAT THE CHAIN CAN STILL DO

Add encrypted balances. Match encrypted invoice amounts. Compare encrypted goals. Select sealed-bid winners. Route escrow release. Publish proof verdicts without leaking the underlying number.

The chain enforces the rules without learning the amount.

blank.

PRODUCT SURFACE 07 / 19

PRODUCT SURFACE

Private amount payments, as reusable workflows.

01 • P2P

Send

Private amount peer payments with public counterparties.

02 • B2B

Invoice

Vendors get paid without exposing what the invoice was worth.

03 • INBOUND

Request

Ask for a private payment on a shareable link.

04 • TEAMS

Payroll

Team members don't see each other's pay.

05 • GIFTS

Claim links

Bearer, email, and wallet-gated payment URLs.

06 • COMMERCE

Storefront

Private payments and sealed-bid listings.

07 • FUNDS

Crowdfund

Encrypted goals. Encrypted contributions.

08 • PROOF

Proofs

Prove balance or income above a threshold — without revealing it.

09 • ESCROW

Escrow

Encrypted-amount escrow with on-chain settlement rules.

07 • PLUS: SWAP, BRIDGE, AND SUPPORTED TESTNETS • 11 SURFACES TOTAL

MYBLANK.APP

blank.

PUBLIC LINKS 08 / 19

PUBLIC LINKS

A link can be public. The amount doesn't have to be.

/i/:invoiceId	Invoice
/r/:requestId	Payment request
/v/:proofId	Verifiable proof
/claim/:chainId/:linkId#secret	Claim link
/shop/:chainId/:listingId	Storefront listing
/fund/:chainId/:campaignId	Crowdfund campaign
/escrow/:chainId/:escrowId	Escrow agreement

MYBLANK.APP/I/INV_2X4Q

• ENCRYPTED

USDC

BASE SEPOLIA • 0X9F...2A

VERIFIED

Each link turns a private amount payment into a product workflow — shareable, verifiable, and settled on a public chain.

blank.

USER EXPERIENCE

It should feel like a payment app first.

The user does not need to understand FHE to make a private amount payment.

TECHNICAL EXECUTION

A full-stack encrypted payment app.

LAYER	STACK
Frontend	React, Vite, wagmi, viem
Wallets	Standard EVM wallets · Rabby path · passkey smart accounts
FHE	Fhenix CoFHE · TFHE WASM · encrypted handles
Contracts	Vault · BusinessHub · ClaimLinks · Storefront · Crowdfund · Escrow
Account abstraction	ERC-4337 smart accounts · paymaster path · self-pay gas fallback
Data	Chain settlement · Supabase indexing for fast UI reads
Deployment	Vercel custom domain · CI for app and contracts

blank.

TRUST POSITION 11 / 19

TRUST POSITION

A narrow privacy claim is a feature.

We tell users exactly what we hide. And exactly what we don't.

WHAT BLANK HIDES

The numbers that shouldn't be public forever.

- Amounts
- Encrypted balances
- Gift values
- Contribution amounts
- Sealed bid amounts
- Escrow amounts
- Payroll row amounts

WHAT BLANK DOES NOT HIDE

The settlement record stays public.

- Sender
- Receiver
- Contract
- Chain
- Timestamp
- Transaction hash

11 • BLANK IS NOT A MIXER. BLANK IS AMOUNT PRIVACY.

MYBLANK.APP

blank.

COMPETITIVE POSITION

Different problem. Different shape.

CATEGORY	WHAT IT FOCUSES ON	HOW BLANK DIFFERS
Mixers	Hiding sender and receiver links	Blank keeps counterparties public
Shielded pools	Private account or pool state	Blank focuses on payment workflows
ZK proofs	Proving statements	Blank computes on encrypted values
Private ledgers	Closed-system privacy	Blank keeps public-chain settlement

Blank is not trying to make Ethereum invisible.
Blank is making payment amounts private.

blank.

MARKET 13 / 19

MARKET POTENTIAL

Payment flows where public amounts cost real money.

Wedge: private invoices, requests, and claim links. Platform: encrypted commerce and developer payment rails.

WEDGE

Crypto payroll teams

Stop publishing salaries.

WEDGE

DAOs & contributor networks

Private contributor pay.

WEDGE

Agencies & freelancers

Invoices without leaked rates.

WEDGE

B2B vendors

Private pricing per customer.

PLATFORM

Creator businesses

Tip and product income, private.

PLATFORM

Fundraising teams

Encrypted goals, encrypted contributions.

PLATFORM

On-chain commerce

Sealed-bid & private-amount storefronts.

PLATFORM

Wallets & payment apps

Embed Blank's private payment rails.

13 · WEDGE → PLATFORM

MYBLANK.APP

blank.

STATUS 14 / 19

CURRENT STATUS

Shipped, not proposed.

LIVE ON PUBLIC TESTNET

myblank.app

The product can be opened, signed into with a wallet, and tested today — payments, commerce, proofs, business flows.

Base Sepolia

Ethereum Sepolia

PUBLISHED SURFACES

/whitepaper	Architecture & threat model
/brand-kit	Public identity system

FOUNDER 15 / 19

FOUNDER

Pratik

- Master's in blockchain · India
- Author of *The Blockchain Path*
- Hosted offline Web3 events at two universities
- Contributed to multiple Web3 products
- Product, marketing, and community experience

Why this matters. Blank sits between hard infrastructure and real adoption. The founder has worked on both — blockchain systems, and the community side of getting people to care.

15 · PRATIK · FOUNDER

MYBLANK.APP

blank.

ROADMAP 16 / 19

ROADMAP

Gated by proof, not hype.

NEAR TERM · ON TESTNET

- Stable EVM wallet flows on supported testnets
- Harden links, storefront, crowdfund, escrow
- Swap and Bridge stability
- Cross-user state & refresh truth
- Mobile transaction QA after desktop stable

BEFORE MAINNET

- Third-party audit
- Mainnet-readiness validation matrix
- Production RPC, indexer, monitoring
- Incident response process
- Legal & compliance review for amount privacy

16 · NO MAINNET BEFORE AUDIT

MYBLANK.APP

blank.

BOUNDARIES 17 / 19

WHAT BLANK WILL NOT BE

Discipline is part of the product.

— A mixer

— A sender anonymity tool

— A token launch

— A points farm

— A speculative yield product

— A mainnet product pre-audit

Blank is payment infrastructure.

Normal payments should not publish private amounts forever.

blank.

THE ASK 18 / 19

THE ASK

Who we're looking for.

USERS

Testnet users who pay real people on-chain.

Crypto payroll, agency, DAO, creator, commerce teams.

PARTNERS

Design partners with real payment workflows.

Teams ready to pilot private invoicing, requests, and claim links.

ECOSYSTEM

FHE ecosystem support.

Co-development with Fhenix and adjacent FHE infrastructure.

SECURITY

Audit and security partners.

Before mainnet. Independent review of contracts and FHE surface.

CAPITAL

Investors aligned with privacy infrastructure.

Long horizon. Compliance literate. Payments-first.

LIVE

Open the app. Try a private payment.

► myblank.app

blank.

• SAME CHAIN • DIFFERENT VISIBILITY 19 / 19

CLOSING

Ethereum made settlement public by default.

Blank keeps public settlement.

Blank keeps public counterparties.

Blank encrypts **the amount**.

Same chain. Same finality.

Different visibility.
